

Venous disease? Heavy legs ?

A better
quality of life
with intermittent
pneumatic **compression**

Ask your
healthcare professional

Regain fluid balance

Benefits

Immediate and sustainable relief of heavy legs sensation

Lightness thanks to oedema drainage and legs' deflation

Comfort during a wellness session

Recovery or/and preparation in sport practice

Indications

Pressotherapy, also known as Intermittent Pneumatic Compression (IPC), has initially been developed to treat severe **veino-lymphatic diseases**.

Stimulating the blood circulation, Pressotherapy is very useful to relieve **heavy legs** symptoms as well.

Technology

Patented

Secured

Non-invasive

In practice

An IPC session usually last **30 minutes in semi-recumbent position**. Legs are threaded in comfortable "massage boots". A 10-session protocol is recommended to maximize benefits.
