**Eureduc**  
Technologies to optimize physiotherapy

**Regain fluid balance**

# French manufacturer of medical devices for more than 40 years

Pressotherapy is a mechanical drainage technique that activates the venous and lymphatic drainage, by operating a compression and decompression massage through compartmentalized accessories. Our professional medical devices, consisting of an equipment and different massage elements - boots or sleeves - potentiate the effect of medical compression and manual drainage carried out by the physiotherapist. Performing, robust and reliable, they are essential in the management of venous and lymphatic disorders and contribute to significantly improve patient's quality of life.

As such, our devices are used in the majority of expert Lymphology centers and among physiotherapists involved in the management of lymphedema, as well as in many Phlebology clinics.

All our machines incorporate the patented dual pressure gradient technology which, combined with the specific design of the massage garments with overlay of the compartments, ensures unmatched efficiency, even at low pressure, and an excellent feeling from the patient. They are designed and manufactured in France according to ISO 13485, CE Medical 0459 certified and FDA approved. They are guaranteed for 3 years and the repair service is carried out in our facility in Rambouillet (Yvelines).

**Eureduc : the benchmark among Healthcare Professionals for  
Pressotherapy - Intermittent Pneumatic Compression devices.**

## TP07i: The Flagship

**7-compartment Pressotherapy Device controlled by touch screen.**

Anterograde or retrograde drainage for fragmentation and treatment of the most complex edemas.

For demanding users  
and reference centers

## TP05i: The polyvalent equipment

**5-compartment Pressotherapy Device  
controlled by touch screen.**

Easy-to-use, thanks to  
pre-set protocols.

For use in  
liberal practice

## TP05: The Veteran

**5-compartment Pressotherapy Device with manual control.**  
Unique Drainage Protocol.

Possibility of adaptation  
for visually impaired therapists

## TP03: For home treatment

**Easy-to-carry pressotherapy Device.**  
Simple system for individual daily use.

For chronic patients  
or elite athletes

# Massage garments

3, 5 or 7-chamber boots and sleeves made of robust and flexible material. Superimposed compartments and no closing system for a perfectly circular and homogeneous compression.
